Senior Supply Chain & Data Analyst | Analytics, Forecasting & AI Automation

I spent eight years running supply chains (stores, distribution centres, S&OP, 3PLs) before moving to the data side. At flaconi I lead analytics for Supply Chain and Master Data: I build the forecasts, warehouse views and dashboards that planning runs on, and production LLM automations with validation gates around them. I bring **SQL and Python depth**, **ERP and master-data fluency**, and the operator's instinct for which number matters before the order window closes.

PROFESSIONAL EXPERIENCE

Senior Supply Chain Analyst (previously Senior Data Analyst) · flaconi, Berlin — Oct 2023 – Present

Analytics lead for Supply Chain and Master Data at a multi-market European online beauty retailer; partner to Planning, Purchasing, Category, MDM, Finance and Data Engineering.

- **Production LLM pipeline:** combined a deterministic rule engine with a Gemini rewrite step behind four validation gates, bringing ~4,300 product descriptions into line with new EU green-claims rules two days before the legal deadline and cutting the products needing a human editor by more than 80%. LLM cost measured per call, not estimated.
- **AI tooling that teams run without an analyst:** LLM agents (Gemini, Claude) that let non-technical teams query the warehouse in plain language, and a Slack bot (Apps Script, BigQuery, Jira API) that analyses supplier price lists and files the results to tickets; in regular use by Purchasing, covered by 11 regression tests.
- **AI governance:** authored five Claude skills that encode company data semantics and two read-only MCP connectors (later retired for an approved connector); led the AI-connector governance review with the CTO and IT (least privilege, system-owner approvals, read-only service accounts).
- **KPI integrity:** restated the core availability (understock) KPI on one consistent rule set in SQL, exposing a year-on-year deterioration the dashboard hid and issuing an early warning ahead of peak season: 3x more core SKUs below 30 days of cover.
- **Forecasting and planning:** SKU-level buying forecasts netted against stock and open POs (weekly PO plan for 625 SKUs within 0.5% of target, fill rate ≥98% under a 1.4x demand stress test); a calibrated probabilistic ETA model built from 81 weekly PO snapshots (97% predicted, 98% observed).
- **Data engineering and BI:** own the Supply Chain Tableau space (16 of its 21 workbooks; ~50 site-wide), generating and patching workbooks from SQL by script; ship Exasol ETL and view changes with checksum verification (new stock-tag ETL matched the reference on 100% of 184k SKUs); proposed the sell-in fact-table design for the Databricks migration (dating sales by invoice posting date cuts year-end misallocation by more than 90%).
- **Automation and monetisation:** automated the 8-figure vendor bonus calculation for 200+ vendors; launched a supplier-facing analytics portal that turned internal reporting into a revenue-generating product; ran a data literacy programme (SQL, Tableau) with department leadership.

Supply Chain Director · Hayat Market, Tehran — Nov 2019 – Nov 2022

60-store discount retail network, 2 distribution centres, 5,100 SKUs; reported to the Board.

- Built the analytics function from zero: the company's first BI roadmap and KPI framework; presented the cost-reduction case directly to the CEO and Board.
- Business architect for the SAP ERP rollout: defined target-state supply chain, inventory and procurement processes and translated physical operations into system logic.
- Set stocking policy across the network with demand and network simulation (Arena, R); managed 3PLs against SLA and OTIF targets; standardised procure-to-pay into a single workflow.

Warehouse Executive (acting Country Logistics Manager) · British American Tobacco, Iran — Dec 2017 – Nov 2019

- Ran the monthly S&OP cycle, aligning Sales, Finance and Production leadership on demand, capacity and supply priorities.
- Directed warehouse operations across 4 sites, 400+ SKUs and 10+ logistics suppliers; owned budgets that grew from £1.8M to £2.6M while delivering savings projects; full inventory accuracy and zero accidents throughout.

Head of Planning · BGF (Iranian master franchise of BGF Retail), Tehran — Apr 2017 – Dec 2017

- Built an automated store-ordering system for 4,200+ SKUs across a DC and 20 stores using statistical demand logic; supply chain representative on the SAP implementation committee.

Supply Chain Supervisor · Ofogh Koorosh Chain Stores, Tehran Mar 2015 – Apr 2017

- Inventory control and replenishment during rapid store expansion; defined the core inventory logic for the Microsoft Dynamics AX rollout.

Earlier: Graduate Teaching & Research Assistant, SIU Edwardsville, USA (2011–2013); Cost Control Expert, HirbodNiroo (2010–2011); Data Analyst, Hormozgan Steel Complex warehouse (2009–2010).

SKILLS

Data & engineering: SQL (Exasol, BigQuery, T-SQL, Oracle), Python (pandas, asyncio, scikit-learn), R, Airflow, Databricks, Data Vault / SCD2, ETL, GCP (Cloud Run, Secret Manager), Git

AI & automation: Gemini API (production), Claude Code, MCP servers, Claude skills, LLM validation and cost control, Google Apps Script, Slack / Jira / Gmail APIs, Make.com

BI: Tableau (incl. REST API), Apache Superset, Google Sheets, Excel / VBA

Supply chain: demand and supply planning, S&OP, inventory optimisation, replenishment, procurement, 3PL / OTIF management, simulation (Arena)

Systems: SAP S/4HANA, MS Dynamics AX and 365 Business Central, PIM / MDM (Syndigo), commercetools, Jira, Confluence

EDUCATION

PhD candidate, International Logistics · Constructor University, Bremen 2023 – present

Part-time alongside full-time work; proposal defended; research on gamification in warehouse order picking.

MSc Industrial Engineering · Southern Illinois University Edwardsville, USA 2011 – 2013

GPA 4.0/4.0; thesis on a reverse-logistics model for medical waste with RFID and wireless sensors.

BSc Industrial Engineering · Iran University of Science and Technology 2003 – 2009

CERTIFICATIONS, PUBLICATIONS & LANGUAGES

Certificates & training: CSCMP Supply Chain Foundations: Demand Planning Professional Certificate (2024); Hyperskill (JetBrains Academy): Databases with SQL and Python, Pandas for Data Analysis (2025); SAP S/4HANA Essential Training (LinkedIn Learning, 2025)

Publications: Reverse logistics network design for medical waste: ISERC 2013 (first author) and INFORMS 2013 (co-author)

Languages: English (fluent), Persian (native), German (basic)
